## **DETAILED ACTION**

### ***Response to Amendment***

1. Applicant's amendment and accompanying remarks filed 7/21/03 have been entered and carefully considered. Applicant's amendment is not found to patentably distinguish the claims over the prior art and Applicant's arguments are not found persuasive of patentability for reasons set forth herein below.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3 and 6-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Everhart et al (5858503), as set forth in the previous two actions.

Applicant argues that Everhart fails to teach the newly added limitation that greater amounts of the active agent are present in the interior, relative to the amount exposed to the outer surface. Applicant argues that Everhart's use of a vacuum suction would leave more agent on the outer surface of the fabric.

However, Everhart specifically teaches that a "substantial portion" of the solution is drawn from the fabric (col. 11, lines 39). Everhart also teaches that solution puddling or pooling on the surface is undesirable and in the event of such a occurrence the vacuum pressure should be increased to pull the solution into the interior of the fabric (col. 11, lines 56-65). Everhart also teaches that the permeability of the fabric can be

increased and the viscosity of the solution decreased in order to allow the solution to more easily penetrate the fabric (col. 11, lines 52-55). Everhart further teaches that the fabric to be washed or rinsed after impregnation (cols. 11-12, lines 65-5). This process would remove much of the solution left on the surface of the fabric. Therefore, Everhart teaches applying more agent to the interior of the fabric.

4. Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Everhart et al (5858503) in view Phillips (5972505 or 5733490), as set forth in the previous two actions.

Applicant's traversal of this rejection relies on the arguments set forth above.
